Report dated August 22, 2007

# QUARTERLY PORTFOLIO REVIEW

## *Quarter Ending June 2007*

### Economic Commentary

#### CHAIRMAN BERNANKE AND THE FEDERAL RESERVE ON 'PERMAHOLD'

In his testimony before Congress (Humphrey Hawkins), Ben Bernanke continued the recent Fed trend of leaving investors scratching their heads. While he reiterated the Fed's worries regarding weakness in the housing market and detailed significant problems in the subprime mortgage markets he also commented on more robust economic growth and emphasized the Fed's anti-inflation stand. He reiterated the Fed's long standing policy of being wary of inflationary pressures.

Figure 1: Housing Starts

Investors then, were left pondering these remarks and trying to decipher his message to figure out where, exactly, the Fed stands with respect to raising (or lowering) the Target Fed Funds Rate.

Figure 2: Target Fed Funds Rate

The Fed was relentless in raising rates from the middle of 2004 (albeit in small increments) to June 2006 when the Target Fed Funds Rate reached 5.25%. The Fed has, since then, issued many statements about remaining vigilant against inflation, but has not actually raised rates. Concern at various economic factors, particularly the housing market, has made the Fed cautious about being too aggressive. The current subprime market problems, that threaten to spill over into other areas of the economy, have made this dilemma even worse for the Fed since both rising inflation and declining economic growth can't be fought at the same time. Fighting one factor generally causes the other to move in the adverse direction.

However, we believe that unless there is a major escalation of the housing market problem, the Fed will continue to be very sensitive to inflationary pressures. It is interesting to note that Ben Bernanke was once nicknamed 'Helicopter Ben' for suggesting that deflationary problems could be solved by scattering cash from the sky. Now, it appears that the Fed Chairman has taken fighting inflation to heart. This attitude appears to be behind his reiterating inflationary dangers and the Fed's commitment to fighting those dangers even as he deals with the economy. While some may take this as a mixed signal, it seems that what the Fed is saying is that they are aware of problems with the economy, but still remain focused on inflation because they do not believe inflationary pressures have been eliminated. Additionally, Bernanke, unlike his predecessor, Alan Greenspan, relies on the Fed's inflation and growth forecasts to influence monetary policy. This type of reliance on long-term forecasts allow the Chairman to weather short-term volatility since long term forecasts of consumer expectations and inflation are better predictors of the future state of the economy than reviewing volatile monthly economic reports.

The value of the dollar continues to decline against other major currencies. As this makes imports more expensive (American consumers have to give more dollars to buy goods in foreign

currency), it is also considered inflationary. And while the price of oil has stabilized a little over the last few months, it is still very high by historical standards, and also contributes to inflationary pressures in the economy. Rising prices is the essence of inflation and causes the consumers to have less disposable income to spend causing lower economic growth.

Figure 3: U.S. Dollar vs Euro

Because of these continued inflationary pressures and also the above stated Fed position of continuing to be vigilant against inflation, we believe that the Fed still has a tightening bias. However, due to current economic problems, particularly the housing market, we believe they will continue to be on the sidelines for the near future, with their bias in check, unless there are further indications of pronounced inflationary pressures in consumer products and/or labor market.

We thus do not expect the Fed to raise rates in the near future, with the caveat that if they detect inflationary pressures building up, their sideline stance will change and then we can expect them to raise the Fed Funds rate.

Figure 4: Table of Key Economic Indicators

The economic data in Figure 4 are color-coded with red items generally pointing toward a weaker economy and green items generally pointing toward a stronger economy. The number of red items decreased from 15 last quarter to 11 this quarter thus supporting Fed's expectation that economic growth will pick up in the 2<sup>nd</sup> half of the year.

## Strategy

Figure 5: Yield Curve

The last quarter saw a significant change in the shape of the curve (See Figure 5). The three month to five year spread was inverted by nearly 63 basis points on March 1, 2007. However, during the quarter, short term rates actually declined (26 basis points), while five year rates rose (39 basis points) and the curve 'steepened' to the extent of the three month to five year spread essentially going to zero basis resulting in a nearly flat yield curve.

One of the key questions going forward is if this steepening is going to continue? The answer to this question is heavily dependent on the Fed. If the Fed is expected to start raising interest rates then we can expect the curve to steepen as we expect the longer end of the curve to take the lead as interest rates start to go up.

However, we have seen that the Fed, while ready to raise interest rates if inflationary pressures become worse, would prefer to stay on the sidelines due to factors like the housing market and the growing problem in the subprime mortgage markets. Also, a number of hedge funds have indicated significant liquidity problems, and these have also made credit markets jittery. Thus, we do not think the Fed will raise rates in the near future, resulting in a range bound market.

We plan to maintain our mostly overall neutral stance for the core portfolio vis-à-vis approximately matching (95% to 100%) the index's duration.

We will continue to monitor the portfolio and search for opportunities to enhance the portfolio's carrying yield while maintaining the duration differential between the range stated above.

One area we are watching carefully is credit spreads. Both the subprime market problems and the hedge fund problems have made the market increasingly nervous about risk and we fully expect these worries to manifest themselves across the board in credit spreads. While we have already detected some movement in these spreads, we expect these to continue through August, and perhaps through the rest of the quarter ending September 30. Historically speaking, even with the recent widening of credit spreads, we are still near the low end of "normalized" spreads.

Because of these concerns we may increase our allocation to US Treasuries at the expense of other segments of the market. This will reduce the overall yield on the portfolio, but we think that the risk of widening credit spreads makes this a feasible re-allocation of funds for the near future.

## **Portfolio Results**

### **Cost and Market Value**

As of June 30, 2007, the Treasurer's Core Portfolio had a cost value of **\$1,110,842,384** and a market value of **\$1,105,644,861**. As of the same date, the Treasurer's Liquidity Portfolio had a cost value of **\$707,766,440** and a market value of **\$710,956,413**. At the end of the quarter, 61.08% of funds were in the Core Portfolio and 38.92% in the Liquidity Portfolio.

### **Exposure to Market Risk**

The average maturity of the Core Portfolio was 1.87 years and its effective duration was 1.67 years or 97.21% of the benchmark index duration of 1.72 years. The Merrill Lynch 1-3 year Treasury Index is the benchmark index for the Core Portfolio.

The average maturity of the Liquidity Portfolio was 0.32 years and its duration was 0.323 years or 84.69% of the benchmark index duration of 0.381 years. The Merrill Lynch 3-6 months Treasury Bill Index is the benchmark index for the Liquidity Portfolio.

### **Exposure to Credit Risk**

The average credit quality of the combined portfolios remains high. The percent of the combined portfolio invested in highly liquid and safe US Treasury securities is 25.5% and U.S. Agency (non-mortgage-backed) securities is 55.4%. Investments in corporate securities (other than money market instruments) are currently 8.6% and this complies with the maximum percentage of 30% allowed in the Investment Policy. The pool's remaining funds were in Money Market instruments and the California Local Agency Investment Fund representing 10.5% of the portfolio. The pie chart in Attachment #7 shows the allocation of assets of the combined portfolios.

**Yield Curve change during the quarter:**

As was mentioned earlier, the shape of the yield curve changed during the quarter. Yield on the shorter end declined somewhat, but yields in the three to five year sector increased (with the five year Treasury yield going up by 39 basis points).

This contributed negatively to our returns. While our presence in the very short term was beneficial, the impact was not very significant. However, the index does not have any securities greater than three years in maturity, and as the City's portfolio does, and that sector underperformed, it contributed negatively to the City's core portfolio's performance against the Merrill 1-3 year Treasury index.

**Credit Spreads:**

Credit spreads widened during the quarter as the dimensions of the subprime problems spread and a number of hedge funds reported serious problems. This also hurt the portfolio in its performance against the Treasuries only index.

**Total Return/Earned Interest Yield**

For the quarter ending June 30, 2007, the Treasurer's Core Portfolio had a total return of 0.741% versus a benchmark return of 0.711% and an earned interest yield for the quarter of 4.842%. The Liquidity Portfolio had an earned interest yield of 5.293% for the quarter ending June 30, 2007.

Fiscal year to date as of June 30, 2007 the Treasurer's Core Portfolio had a total return of 5.470% versus a benchmark return of 5.081% and an earned interest yield of 4.448%. The Liquidity Portfolio had an earned interest yield of 5.275% for fiscal year to date.

## Projected Cashflow Requirements

The Investment staff has reviewed and the Treasurer has affirmed that the Liquidity Portfolio has sufficient maturities and liquidity to meet the City's expenditure requirements for the next six months.

MONTH	CASH INFLOWS	CASH OUTFLOWS	NET MONTHLY CASHFLOWS	CUMULATIVE NET CASHFLOWS
July	476	355	121	121
August	340	337	3	124
September	313	206	107	231
October	192	166	26	257
November	270	179	91	348
December	304	220	84	432

(All dollar amounts in millions)

**Legend:**

Cash Inflows- All revenues, reimbursements, interest receipts and investment maturities.

Cash Outflows- All disbursements to include payroll, pension payroll, accounts payable and wire transfer payments (e.g. water payments, IRS taxes & bond payments).

Cumulative Net Cashflow- All future cumulative net flows available for reinvestment. Since the target duration of the Liquidity Portfolio is approximately .33 years it will not be unusual for the cumulative net Cashflow figure to equal or closely approximate the size of the Liquidity Portfolio.

Cashflows based on Actual Cashflows where applicable, otherwise, based on quarterly updated projection Cashflows.
